

All usable JARVIS-2D data: reference-free structure/electronic common space
all 1,103 materials set the coordinates; n/p transport covers 806/803

Low-kL colour is a cross-domain structure surrogate (137 experimental training rows; grouped-CV Spearman=0.66), not a 2D experimental value

- all other JARVIS-2D materials
- top-20% PF AND top-20% low-kL surrogate
- strict top-10% AND top-10%
- formula-matched experimental zT >= 1
- purple with external formula-level zT < 1
- known high-zT also passes broad screen
