

Weight-free structure-electronic manifold: worst-view neighbour rank controls every edge
 Purple candidates are selected without manifold proximity, so their map position is not built into the colour

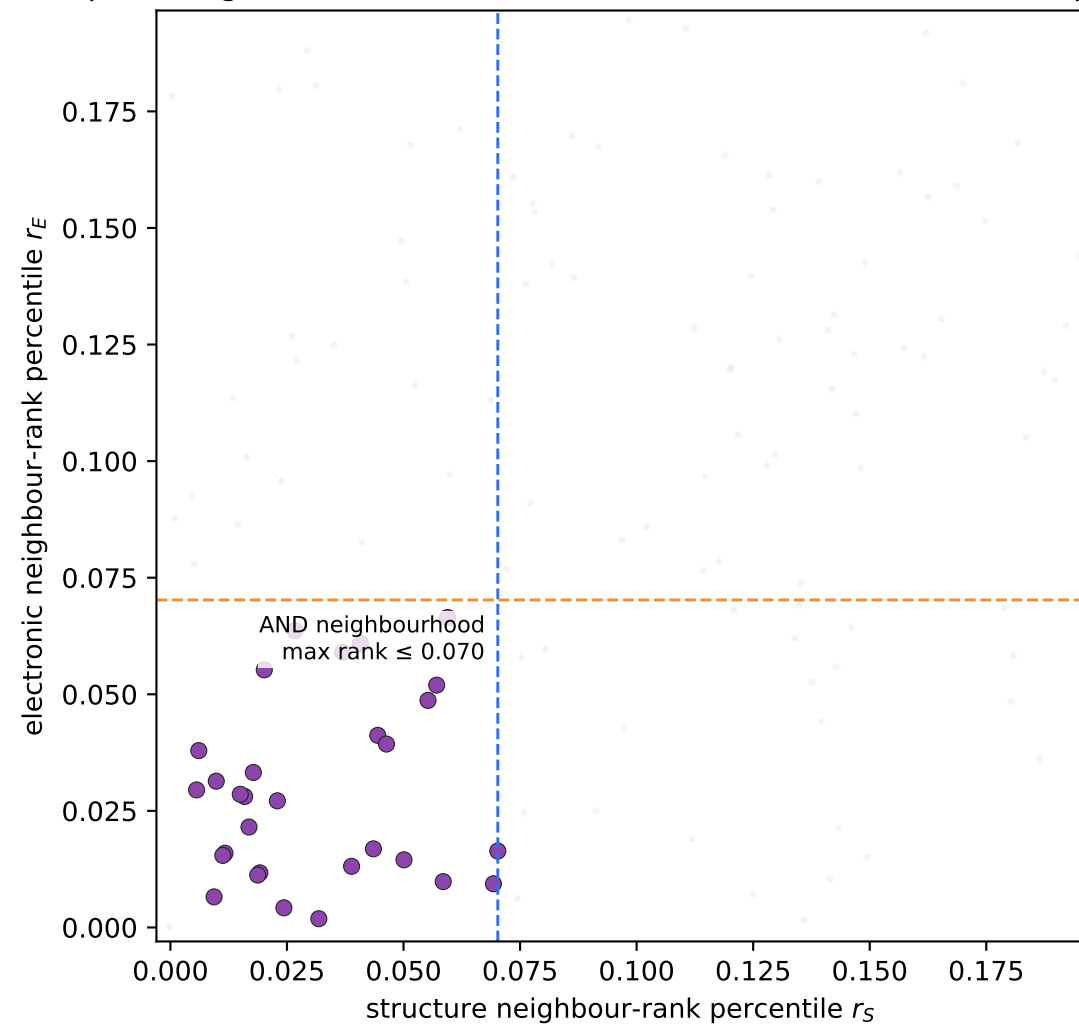

Weighted-sum joint: $d^2 = (d_S^2 + d_E^2)/2$

Strict AND joint: $r_{AND} = \max(r_S, r_E)$

Why AND is interpretable — anchor SnSe
 accepted neighbours minimize the worse rank; no cross-view compensation

Independent leave-one-formula-out test
 full 12D diffusion coordinates; whiskers are formula-bootstrap 95% CI
